Long story short....

Chainsaw carving a bench - step-by-step

This bench was my first one made from several pieces. For the sculptures I took some easy to carve wood.

Simple and local spruce will be cheap and easily available. But it won't last long outdoor.

Dimensions: approx. 60/100cm height and 50/40cm diameter

For the bench itself I bought some old planks at a local carpenter.

## Carving the little wizard

# Carving the little mushroom

## Carving the little mushroom

# Assemble the bench

Find the suitable position in your garden and make sure they have a solid base.

Cut slots into wizard and mushroom and push in the planks.

Do the seating plank first, then the back rest plank.

## Assemble the bench

# Assemble the bench

Colorize as wanted, it'll also protect your wood from rain and sun.

Use your  
Dremel to  
make the  
little details.

By the way,  
I stopped  
using original  
Dremel tools  
as they didn't  
last very long.

These ones  
were better,  
but also much  
more  
expensive:
