Chainsaw carving a tiki- step-by-step

www.schwaebische-kettensaege.de

Get some wood, local
spruce, easy to cut.
You may get it from a log
cabin builder quite
cheap.

Dimensions: approx.
100cm height and 40cm
diameter

Cut the basic shape, don't worry to take some ideas from internet!

Use your bigger chainsaw for the bigger cuts and use your carving saw for the details.

Cut the basic shape, don't worry to take some ideas from internet!

Use your bigger chainsaw for the bigger cuts and use your carving saw for the details.

Carve the details and use your grinder to get a smooth surface.

The patterns were made with the carving saw followed by a dremel tool.

Colours and
painting is
always done by
Lea...
