

Carving an eagle step-by-step

Michael Schaefer

2018

www.schwaebische-kettensaege.de

Long story short....

Chainsaw carving an eagle - step-by-step

Get some wood, this time
I took a kind of easy
one.

Simple and local spruce,
easy to cut, however, it'll
not last very long out
there in the rain and sun.

You may get it from a log
cabin builder quite
cheap.

Dimensions: approx.
120cm height and 40cm
diameter

Sketch the basic shape, don't worry to take some ideas from internet!

Block out the head along the blue lines, then round to shape the dashed blue line is a "plunge cut".

Cut the big pieces first

"unpack" the eagle step-by-step

Form the details

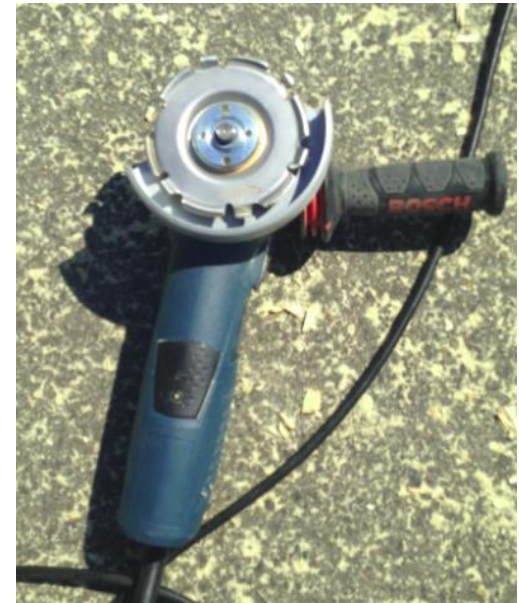

Change tooling and use your grinder to get the surface smooth and even

You may use such a cutting tool to make feathers and patterns. Please take care, it's a quite dangerous tool. Make sure your grinder has a kick back stop feature.

www.schwaebische-kettensaege.de

Use a
carving knife
or your
Dremel to
get the small
details done.

Finally I was
quite happy
with the
result.
